- ✓ Apple and Android Phones and Tablets
- ✓ All Communication Encrypted
- ✓ Secure One-to-One and Group Messaging
- ✓ Secure Mobile Calling
- ✓ Secure Audio/Video Conferencing
- ✓ Secure Video, Image and File Sharing

About Secured Communications

Secured Communications is an enterprise solution for secure encrypted Internet, PC and mobile communication. Users have a secure alternative to SMS texting, plus group messaging, secure mobile call, and video, image, audio and file sharing. The secure PC/online Command Center syncs with mobile devices allowing users anywhere to securely communicate and share information.

Agency Considerations

Better information sharing is key for public safety agencies, but with today's demands, faster information sharing is critical. The challenge is that radio communication has limitations, while text messaging is unsecure, slow, and unreliable. At the same time agencies are recognizing that interoperability isn't just for emergencies; it's for a wide range of on-going applications. Secured Communications through mobile phones and tables can address these challenges, while helping agencies manage BYOD usage.

Benefits of Using

Secured Communications makes it simpler to share more information faster while protecting information security. Secured Communications also provides a simple solution for interoperable non-radio communication between agencies.

Encryption

All communication is end-to-end encrypted using Advanced Encryption Standard (AES 256 bit) technology. The National Institute of Standards and Technology (NIST) approved AES for communicating government classified "secret" and "top secret" information.

Connectivity

You are always connected to your private secure network. Your PC/online Command Center syncs with your iOS and Android mobile devices so whether you are at your desk or in the field, on duty or off duty, you will never miss your messages or file shares.

Basic Operations

Administrators manage the account, create groups, assign Operators, and invite Users. Account licenses are applied when Users register the mobile app. Online access is through a secure "Command Center". Users can install the app to multiple devices. Key features including Burn, Archive and Channels are limited to Administrators and assigned Operators access.

Compliance

Secured Communications integrates technologies and features for HIPAA compliant use. In addition, Secured Communications only uses FIPS Publication 140-2 approved encryption algorithms validated in all relevant categories.

Service Restrictions

Secured Communications service is not available to the public. Service is available to agencies and trusted businesses and organizations. The executive team are all FBI InfraGard members. The company reserves the right to vet requests for service.

Company Profile

Secured Communications, LLC (Secured Communications) is a U.S. based corporation headquartered in San Francisco, CA. The company represents over 30 years of technology expertise, and extensive experience working with public safety agencies.

"What's unique about this system is its ability to allow any public safety agency or private company to quickly exchange critical information."

Using Secured Communications for Agencies

Secured Communications changes how law enforcement agencies communicate by providing a secure enterprise system for communicating operational, investigative and incident specific information by and between command, dispatch, field deputies and officers, special teams, intelligence units, undercover and other public safety personnel. Applications include keeping leadership informed, sharing intelligence with major units and investigations, sending area-wide personnel notifications and alerts, providing operational and tactical messaging and facilitating interoperable communication between agencies and other stake-holders.

Informing Leadership

Keeping command leadership informed 24/7 major incidents, priority investigations and overall activity.

- Chief/Sheriff
- Command staff
- Individual Watch Commanders
- Major enforcement unit commanders
- Major investigations commanders
- PIO's

Notifying Key Operations

Updating specific enforcement and investigative units 24/7 of relevant activity and information.

- Intel units
- Analytical section
- Specific enforcement squads
- Specific investigative units
- Major event details
- PIO's

Communicating Operationally

Facilitating unit specific operational and tactical non-radio communication.

- Field investigations
- Call outs
- Intel sharing
- Community outreach

Interoperable Communication

Providing 24/7 interagency connectivity and on-demand interoperable non-radio communication capability.

- High profile events
- Inter-agency emergency management
- Major incident response
- Mutual aid cooperation
- Homeland security intel sharing

Command Center Syncs Live with Mobile Phones and Tablets

Alerting All Hands

Notifying all personnel regarding major incidents, threats, emergencies and agency requests.

- Major incident alerts
- Major threats
- Protest tracking
- Overtime requests
